INT201 Decision, Computation and Language

Tutorial 2 – DFA

Dr Yushi Li

Xi'an Jiaotong-Liverpool University
西交利物浦大學

1. Design a vending machine (DFA) that:

- accepts $1 and $2 coins
- refunds all money if more than $4 is added
- is ready to deliver if exactly $4 has been added

2. Design a DFA with $\Sigma = \{0, 1\}$ accepts those string that starts with 1 and ends with 0.

3. Given a language $A=\{aw_1 aaw_2 a: w_1, w_2 \in \{a, b\}^*\}$, design a DFA that accepts L.

4. Define the language A as:

$$A = \{w : w \text{ is a binary string containing } 101 \text{ as a substring}\}$$

Design the DFA M that $A = L(M)$.
